New Patient Onboarding **AI Agent**

A conversational, scan-first intake agent that turns slow paperwork into a guided two-minute conversation — and delivers a clean, verified patient profile straight to the EHR.

Use Case · Solution · Benefits

THE USE CASE

Onboarding is the first impression — and today it's the slowest step

Repetitive, manual intake

Patients re-enter demographics, insurance and history on long portal or paper forms; staff re-key it by hand.

Errors delay care & billing

Missing or mistyped insurance and ID fields stall the first appointment and slow eligibility and reimbursement.

Patients drop off

Lengthy digital intake frustrates new patients — many abandon forms or arrive unprepared.

THE COST OF FRICTION

~20 min

average time to complete a new-patient intake form

~1 in 3

intake submissions arrive with missing or incorrect fields

High

abandonment on long digital forms before the first visit

Illustrative of typical patient-intake operations; figures vary by setting.

THE SOLUTION

Intake that feels like a conversation, not a form

The mirrorsme.ai onboarding agent greets each new patient and guides them through intake in plain language — built on a scan-first philosophy that minimizes questions and captures multiple data points in every exchange.

Scan-first, not form-first

Patients snap their insurance card and ID. OCR auto-extracts demographics, payer, member ID and coverage — no typing.

Open-ended conversation

Smart prompts capture several details at once and ask only what's still missing, instead of marching through every field.

Structured profile, instantly

The agent validates inputs, checks eligibility and assembles a clean, EHR-ready patient profile in real time.

Result: a guided two-minute conversation replaces a twenty-minute form — available 24/7, in the patient's language.

From hello to EHR-ready in four steps

Human-in-the-loop: the agent handles the routine; people stay in control of the exceptions.

CAPABILITIES

What the agent does out of the box

Scan-first capture

Insurance card & photo-ID OCR auto-populate demographics and coverage.

Natural conversation

Open-ended prompts collect multiple data points per turn, in plain language.

Real-time verification

Eligibility and benefit checks run live as the profile is built.

Multilingual & accessible

Meets patients in their preferred language across web, mobile and voice.

Consent & compliance

Captures HIPAA-aligned consents with a full, auditable interaction trail.

Human-in-the-loop

Low-confidence or sensitive items route to staff for quick review.

BENEFITS

Better for patients. Lighter for providers.

~70%

less time spent on intake

24/7

always-on availability

Fewer

errors into the EHR

Faster

time to first appointment

For patients

- A guided two-minute conversation instead of long forms
- No re-entering data already on their card or ID
- Available anytime, on any device, in their language
- A welcoming, accessible first impression of the practice

For providers

- Far less manual data entry at the front desk
- Cleaner, validated profiles flowing into the EHR
- Fewer eligibility and billing delays from bad data
- Staff freed to focus on care, not keyboarding

Onboarding that feels like a conversation, not a form.

Let's map the agent to your intake workflow and stand up a tailored demo.
